Caruca and the naive agent on the 79 commands of the paper's Fig. 7

Caruca's times are from the paper (Xeon E5-2667 v2, all cores); the agent's from one Claude Code session per command (Fable 5.1, medium effort, Lima VM on an Apple M5 Pro Mac, 2026-10-28). Caruca's counts for cp and diff (308 million and 2.4 billion) cannot fit its measured 2.7 and 3.3 hours, so the paper ran other syntax files or settings for those two. The agent's output has not yet been checked for quality.
